

DDS Unity™

Enable data democratization while ensuring compliance

DDS Unity is a seamless workflow-based governance platform that enables biopharma companies to manage and monitor access to various advanced analytics assets across the enterprise. DDS Unity allows Data Sciences teams to operate more efficiently and collaboratively while ensuring data assets are well governed and compliant with data and security standards.

Unlike other tools in the market, DDS Unity provides an end-to-end solution for Data Science initiatives across biopharma organizations – from provisioning the required tools or datasets to ML ops and downstream model consumption. These features are critical to any life sciences organization interested in maturing its analytics and data science capabilities.

Ensure Compliance

Provides pre-defined workflows for data and environment access, specifically designed for the unique needs of life sciences organizations. Audit mechanisms can be configured to ensure contracts remain in compliance.

Foster Collaboration

Create project-based ML Ops environments to encourage collaboration among data science teams and provide a portal for knowledge sharing across the enterprise. With DDS Unity, model operations require minimal IT overhead and ML models can deploy simply and easily with a single click.

Streamline Access

Reduce the time analytics staff spends waiting for access to new assets and environments, and replace manual resource provisioning with automation, to ensure data science projects can be delivered on time.

Manage Costs

Track and quantify the cost and utilization of analytic assets so operational leaders can manage budgets and more holistically assess value and ROI.

DDS Unity is built on cloud-native technologies and can work in environments with resources and data spread across clouds or accounts. It facilitates easy plug-in of third-party tools including Databricks, Sagemaker, Data Wrangling tools and container ecosystems.
